

Non-Functional Requirements

Non-functional requirements describe how well the system should work.

1. Security – The system should protect user accounts and personal information from unauthorized access.
2. Performance – The system should respond to user requests within a reasonable amount of time.
3. Usability – The system should have a simple and user-friendly interface.
4. Reliability – The system should operate consistently and minimize system errors.
5. Availability – The system should be accessible whenever users need to use it.
6. Scalability – The system should be capable of supporting more users and events in the future.
7. Maintainability – The source code should be organized and easy to maintain or modify.
8. Compatibility – The system should work properly on commonly used modern web browsers.
9. Data Integrity – The system should store event and user information accurately and consistently.
10. Responsiveness – The interface should adapt properly to different screen sizes such as desktops, laptops, tablets, and smartphones.
